

## Everything you'll need - all under one hood !

MotorMate is the newest and most powerful addition to our line of compact and affordable controllers! Following the overwhelming success of our very popular MotorMix, MotorMate again establishes a new standard in the recording arts. MotorMate powers through both the Mix and Edit windows with equal ease !

Each MotorMate channel features a long-throw touch sensitive motorized fader, Mute and Solo switches, and a "Burn Button" to control audio recording and automation. The rotary pots give instant access to pans, aux sends, plug ins, input-output assignments and channel automation modes. The channel "Multi" section actuates send mutes, plug in bypasses, send pre/post routing and control of surround monitoring via our SixtyFour studio router.

MotorMate sports a bright 80 character backlit display for your track labels, pan positions, send levels and plug ins. The "View" switches allow a single MotorMate to control any number of channels, eight at a time. Pressing the "View" switches instantly updates the track labels, switch states and faders! For system expansion, MotorMixes can be added to MotorMate to add channels. Pro Tools® supports use of up to 1 MotorMate and 3 MotorMix units for 32 channel banks.

Full sized transport switches and a balanced high resolution jog / shuttle wheel provide sure and comfortable control of your DAW transport.

**Monitor Interface Module (MIM)**

Pro Tools is a registered trademark of Avid Technology, Inc. and its subsidiaries and divisions.

## Built in monitor section

Connect your mix outputs to the MotorMate monitor interface module (MIM) Mix Inputs. Connect this to your control room and studio speakers and headphone amp inputs. The monitor section allows on / off and level control of control room and studio speaker feeds. A third knob controls the level sent to the front panel headphone jack.

The 8 character timecode display gives you location information in frames, beats or samples. Use the powerful autolocator features to go directly to any edit marker. The navigator keys and exclusive "Zoom Stick" give you control of zoom and track selection and empower you to make precise changes quickly and accurately.

## Controls the SixtyFour studio router ! !

MotorMate also acts as the remote command station for the SixtyFour studio router. One simple control cable allows controller and router to operate as one.

Together they provide routing and level control of all analog gear in your studio. Additionally, the surround control section of MotorMate gives the SixtyFour both overall and individual routing and level control of 5.1 surround speakers.

### Features

- 8 touch sensitive 100 mm high reliability motorized faders
- 8 Endless hi-resolution rotary pots for fader / pan / send / plug-in
- Mute, Solo, Record / Write, Multi, Select switches in channels
- Full sized transport switches and precision jog / shuttle wheel
