

### Industry Standard Award Winner !

MotorMix is compact, affordable and powerful ! Designed and optimized for ease of use, MotorMix eliminates literally hundreds of passes caused by point-and-click mixing. Don't be deceived by its small footprint, you'll be amazed by the in-depth access to all of your DAW mixer functions !

Each MotorMix channel features a long-throw motorized fader, dedicated Mute and Solo switches, and a "Burn Button" to control audio recording and automation. The rotary pots give instant access to pans, aux sends, plug ins, input-output assignments and channel automation modes. The channel "Multi" section actuates send mutes, plug in bypasses, send pre/post routing and countless other functions.

MotorMix sports a bright 80 character backlit display for your track labels, pan positions, send levels and plug ins. The "View" switches allow a single Motor Mix to control any number of channels, eight at a time.

The "fader flip" feature is a really slick way to set up your aux levels quickly using the motorized faders. The Motor-Mix dual-slope worksurface gives you effortless viewing of all your mixer settings. Many users have grown so comfortable using MotorMix that they rarely open the mixer window but prefer to leave the edit window on-screen ! MotorMix is sized to fit on any desktop and is light enough to move aside or place in your lap for eyes-closed mixing.

### MotorMix is also part of a bigger picture . . .

Pro Tools is a registered trademark of Avid Technology, Inc. and its subsidiaries and divisions.

### MotorMix as an expander

MotorMix can stand alone or can also function as eight channel expansions to either MotorMate or Dashboard. You can create custom control consoles for software that supports multiple units. Pro Tools® supports use of up to 4 unit systems for 32 channel banks.
